

IMPORTANT NOTICE OF STREET CLOSURE

Slurry Seal Asphalt Application

“NO” Driving or Parking after 7:00 A.M.

We Apologize for the inconvenience but your street will be closed to ALL traffic on:

MON _____ TUE _____ WED _____ THUR _____ FRI _____ SAT _____

Since parking and driving on the street will be prohibited on this date, PLEASE PARK YOUR CAR ON AN ADJACENT, NON-POSTED STREET prior to the above time so that you will not be deprived of its use. PARKED CARS ON A POSTED STREET WILL BE SUBJECT TO TOW AT OWNERS EXPENSE. You will not be allowed to park or drive on your street until the surface dries and the barricades are removed.

UNDER NORMAL WEATHER CONDITIONS, your street should be back in service by 5:30 p.m. **Work not done because of wet weather or circumstances beyond our control will be rescheduled.** You will be notified of the new date when your street is scheduled.

Due to the number of streets scheduled and various conditions, we cannot tell you the exact time your street will be done. We realize the inconvenience caused by limiting access to your street. Please understand the inconvenience caused at this time is very small compared to what would later be required if this protection were not applied.

Please do not water during this time.

Driving or walking on this new wet asphalt material before it has cured will damage the street; the wet asphalt will stick to your shoes, be splattered upon you car, and will track onto concrete driveways. **Please wait until the street is opened to traffic.** The material is highly adhesive but can be removed from vehicles with products available at local auto parts stores. Read and follow the directions.

Sharp turning during the curing phase will damage the Slurry Seal application specifically power steering turns. Always be sure the vehicle is moving slowly before turning the steering wheel.

Thank you for your cooperation and patience.
